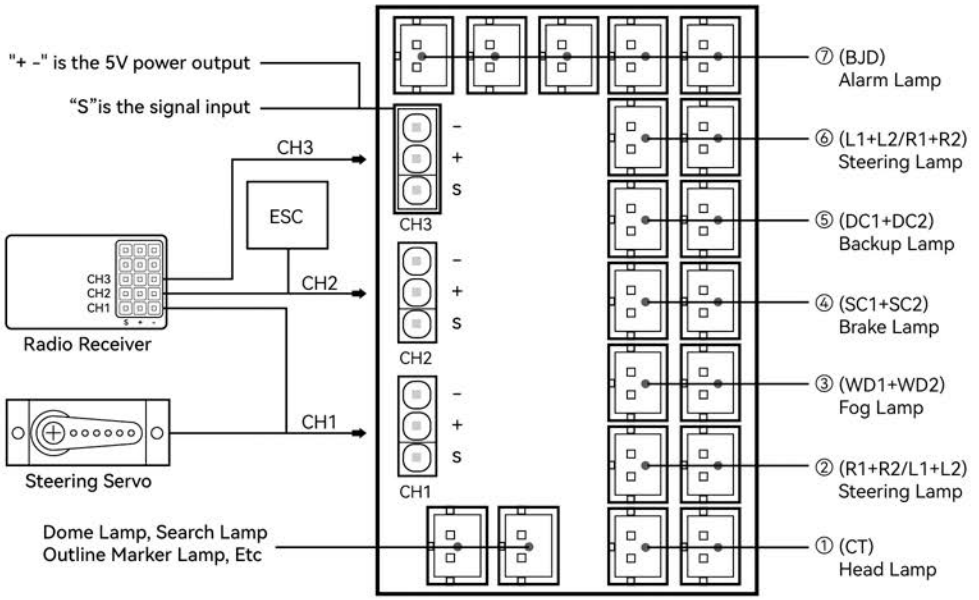
killerbody

LED Unit Set
w/Control Box 24 LEDS
Fit for KB#48765 1/10 Jeep Gladiator Rubicon Hard Body Kit
NO.48778



CH1 Channel: Steering Channel (Turn lLeft, Turn Right).
CH2 Channel: Throttle Channel (Go Forward, Go Backward, Brake).
CH3 Channel: "S" is the alarm lamp control and "+ -" is the 5V power output.

1. Reverse direclion of Steering lamp: The left and right turn directon signals of a few transmitters are opposite to those of the lamp group control board. In case of the above situation, please pull out the steering lamp wires of ② and ⑥ socket on the lamp group control board and plug them in again after changing their positions, then the left and right functions ofthe steering lamp can be exchanged.
2. Alarm lamp mpde control: The (S) socket of CH3 channel on the lamp group control board is the signal input control socket, which can be directly connected to the (S/N) signal ocket of CH3 channel on the receiver by single wire. After the receiver is connected with the CH3 signal socket of the lamp group control board, the CH3 channel button on the transmitter can be used to switch the alarm lamp mode.

Factory Default Lighting State And Executive Function

Setup options		Factory default settings	Other modes	Day mode
②or⑥	Left / Right turn sighal	Linkage mode (When turning left or right, the corresponding steering lamp slowly flashes)	Emergency flashers mode (It can be set by setting menu[2])	Linkage mode
